GCaaS

Subscription based

GCaaS is a simple cloud-based solution requiring little if any upfront investment. The solution operates on a user-based subscription.

Secure

A secure software solution, GCaaS delivers a comprehensive service hosted in ISO27000 accredited UK data centres

Reach

GCaaS can provide instant communication between two-way radios and cellular devices across different manufacturers

Bring it all together

- GCaaS is a simple cloud-based solution requiring little if any upfront investment. The solution operates on a user-based subscription.

- It's quick, easy and efficient.

- Whatever the size of your business.

- Wherever your workforce finds themselves.

- And whenever you need it most.

GCaaS Features

Lone Worker Protection	E2E Encryption	Task Manager	Push-to-Video
Individual Calls	Indoor Localisation	GPS Localisation	Remote control
Voice recording and call history	Guard Tours	Dynamic Group Calls	Priority Calling

Bolt Ons may be required for certain features

Mobile APP

Do more with what you have.

For those looking to do more with what they have, download the Airsys.Cloud application straight to your chosen device whether it's a device from our range, or your own device.

By bringing your own device you can increase productivity and reduce costs by enabling your employees to use a device they already feel comfortable using. There is less time for training and most employees typically have the most up to date technology.
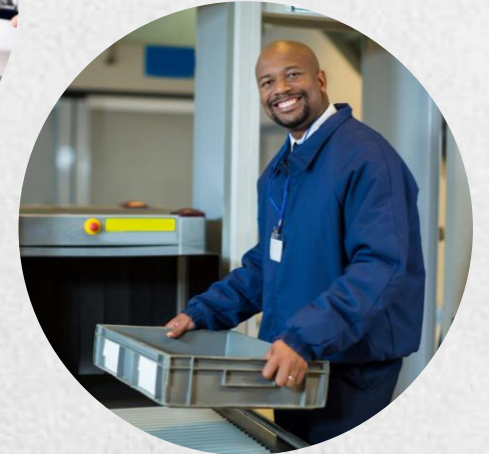

- Group Calls
- Individual Calls
- Priority Calls
- Emergency Call
- Remote Control

- Task Management*
- Indoor Localisation*

- Status Messages
- Voice Recording and Call History
- GPS Localisation
- GPS History Tracker
- GPS Route
- Lone Worker Protection (Bolt On)*
- Push-to-Video*
- Video Calling*

Bolt Ons may be required for certain features

Bolt Ons

Bolt-on applications for Airsys.Cloud

Do you need extra from your subscription? Airsys.Cloud's bolt on applications gives you the flexibility to include the additional solutions that you need when you need them.
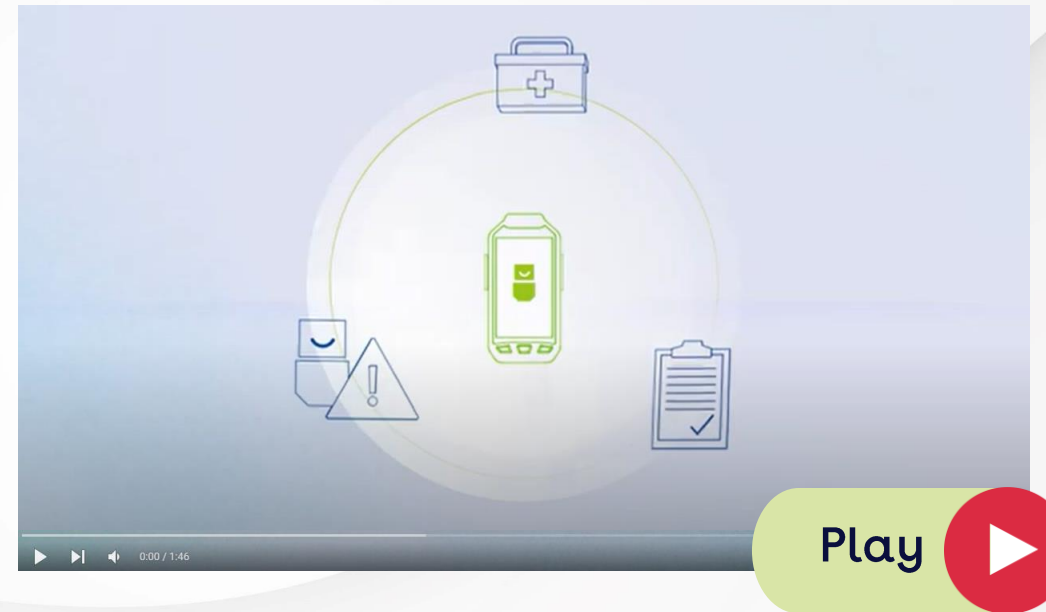

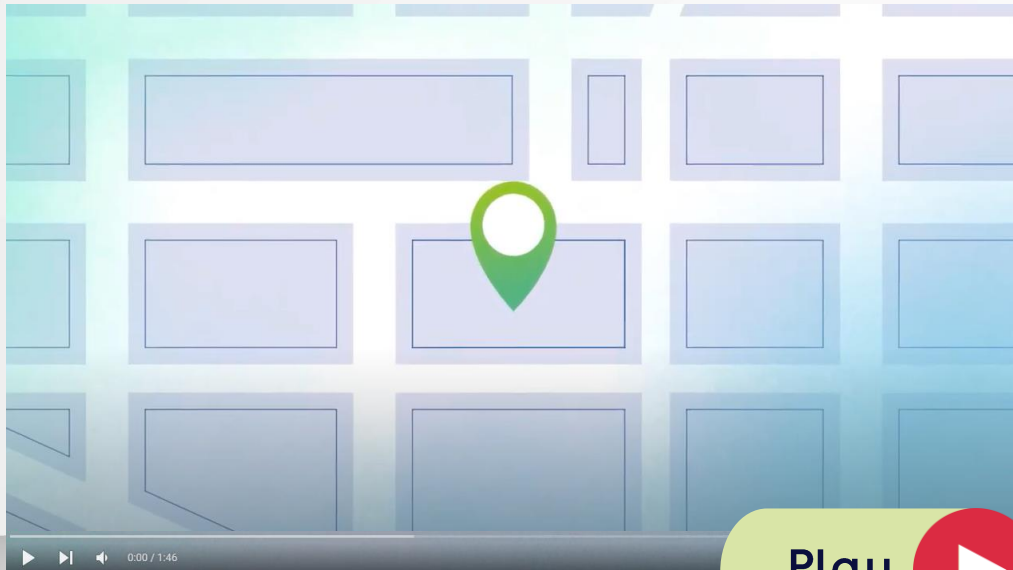

Lone Worker Protection

As soon as the cellular device is in a horizontal position, inactive or fails to move for a period of time, or in the event of an impact or low battery an automatic emergency alert including the identity and location of the cellular device will be sent to the group.

Pushing the Emergency Call Button causes an Alert to go to predefined users which includes the location of the alerting device. Additionally, a full duplex call is initiated between the parties.

✓ Emergency Call   ✓ Worker Down   ✓ Reduce Risk

Play ▶

Indoor Localisation

Indoor localisation is like GPS in a lot of ways, but with one big difference, it thrives inside.

Track and pinpoint personnel wherever they are in real time. This will help you optimise your workflows, reduce costs, and ensure the safety of your crew.
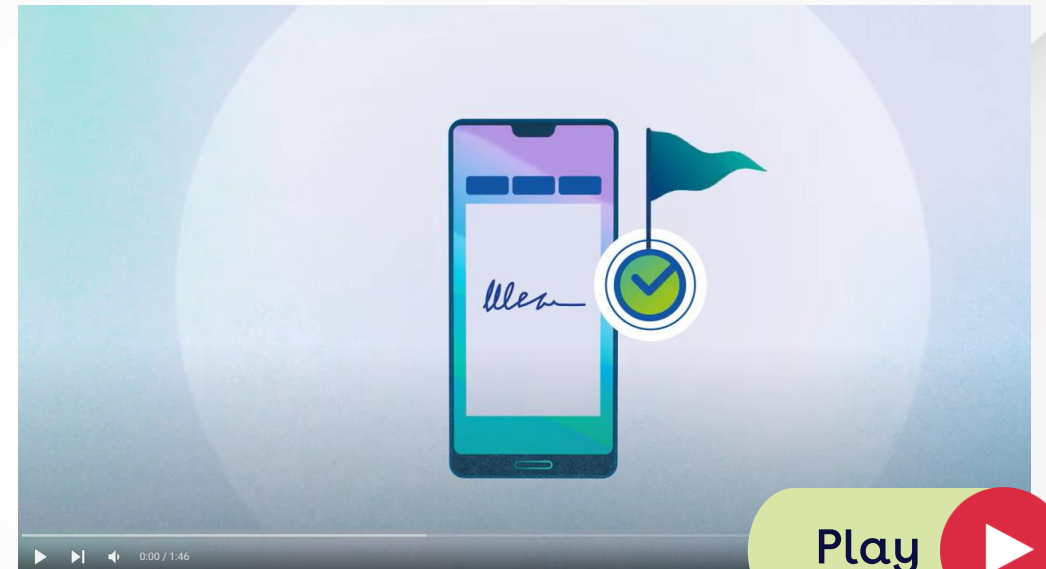

✓ Track and pinpoint personnel ✓ Work in real time

✓ Save money

Push-to-Video

Play

In day-to-day operations, a video capability can save valuable time and provide access to specialists who are able to see what you're seeing and advise how to proceed, potentially saving expensive specialist call outs.

In emergency situations, full-duplex video with audio can help prevent a potentially dangerous situation from escalating, minimising danger to those involved.

✓ Save time ✓ Emergency video ✓ Minimise danger

SIM Connectivity

Sim cards at Airsys.Cloud.
