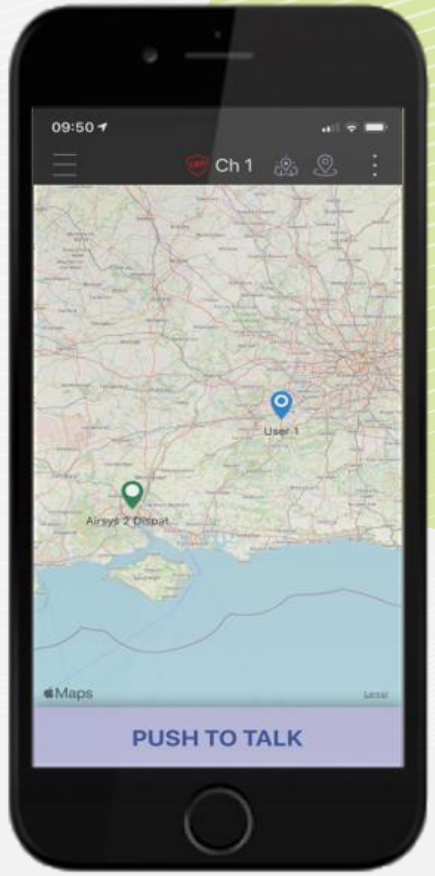
Text and Data Exchange	Lone Worker Protection (Bolt On)*
Task Management*	Push-to-Video*
Indoor Localisation*	Video Calling*



*Airsys.Cloud Bolt Ons

AIRSYS.CLOUD CONTROL

A.BRIDGE

A.Bridge provides the solution to help businesses overcome the challenges of integrating a PMR system with a broadband device. It is easy-to-use and easy to-scale.

Furthermore, it is created as a supplementary part of A.Rodon's Command and Control Centre Solution, allowing visibility of both broadband and radio users from a single terminal.

Flexibility

By adding broadband users to your LMP system, A.Bridge can extend the flexibility of your communications.

Compatibility

A.Bridge is a universal solution that connects different PMR networks with each other over an API interface.

- Interface to PMR
- GPS tracking and group messages
- Instant group 1-2-1 calls

AIRSYS.CLOUD LITE

All-in-one

Airsys.Cloud LITE, an all in one solution!

Airsys.Cloud LITE is an out-of-the-box, ready-to-use, push-to-talk communications solution. Get everything you need instantly to start your conversation being heard.

Included:

- TELO TE300
- Airsys.Cloud Flex PTT APP, Licence and Connectivity
- A.Rodon (PTT) Dispatch (optional)

AIRSYS.CLOUD BOLT ONS

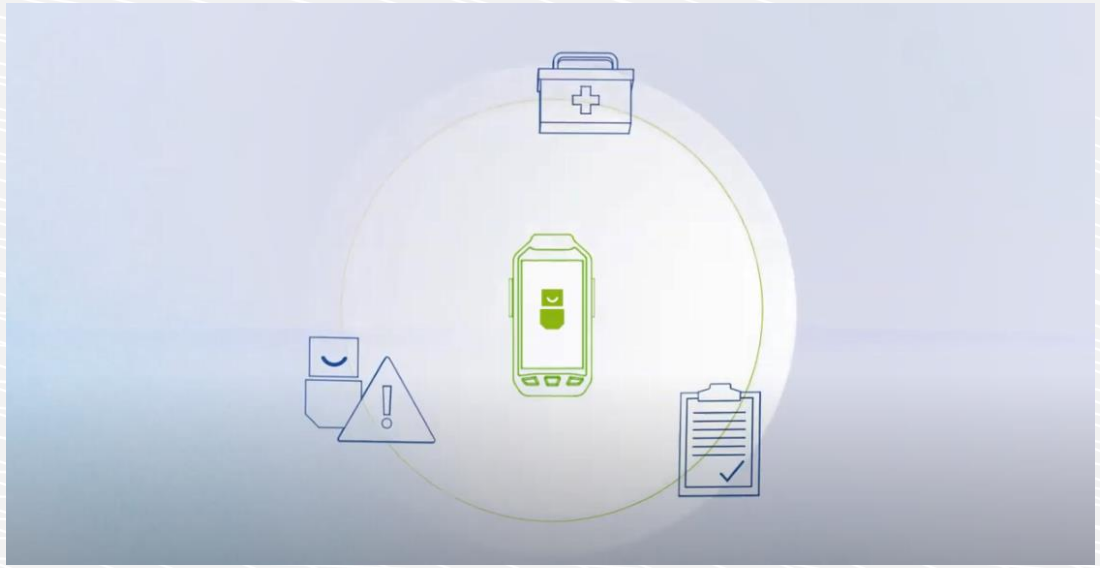
Bolt-on applications for Airsys.Cloud

Do you need extra from your subscription? Airsys.Cloud's bolt on applications gives you the flexibility to include the additional solutions that you need when you need them.

LONE WORKER PROTECTION

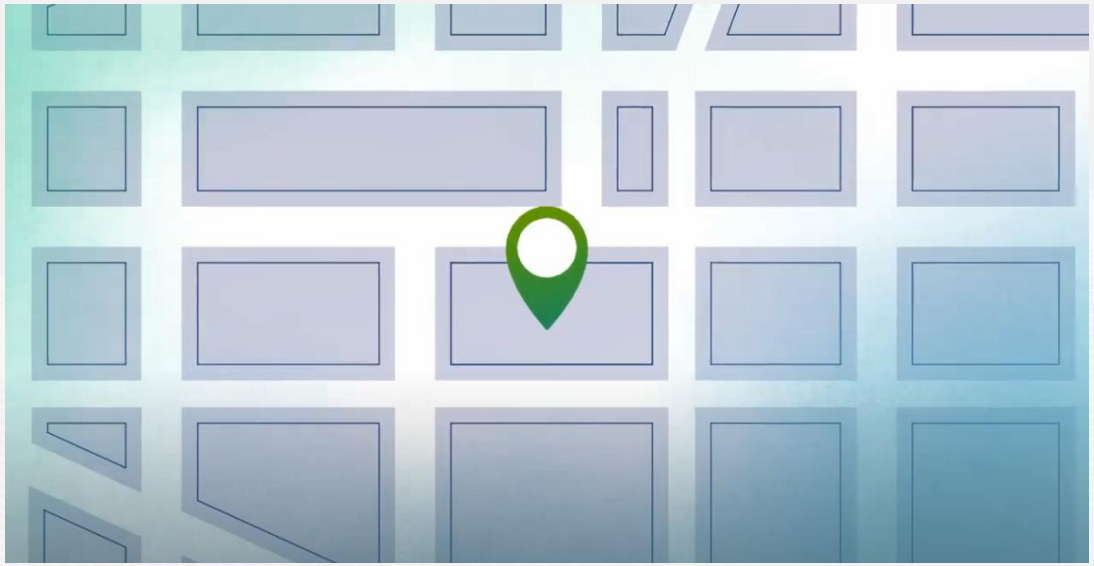
As soon as the cellular device is in a horizontal position, inactive or fails to move for a period of time, or in the event of an impact or low battery an automatic emergency alert including the identity and location of the cellular device will be sent to the group.

Pushing the Emergency Call Button causes an Alert to go to predefined users which includes the location of the alerting device. Additionally, a full duplex call is initiated between the parties.



- ✓ Emergency Call
- ✓ Worker Down
- ✓ Reduce Risk

INDOOR LOCALISATION



Indoor localisation is like GPS in a lot of ways, but with one big difference, it thrives inside.

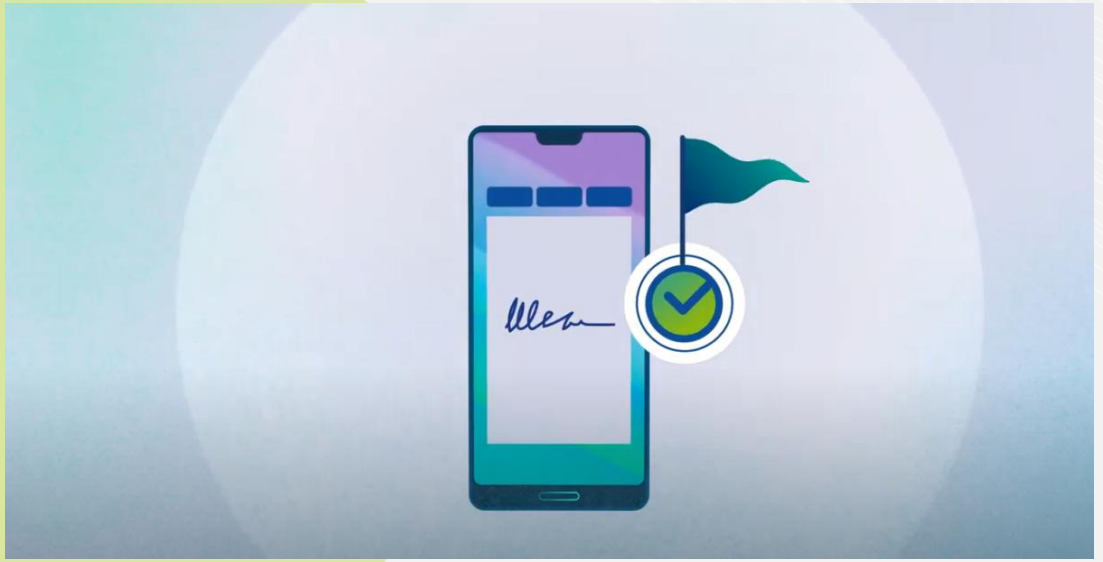
Track and pinpoint personnel wherever they are in real time. This will help you optimise your workflows, reduce costs, and ensure the safety of your crew.

- ✓ Track and pinpoint personnel
- ✓ Work in real time
- ✓ Save money

TASK MANAGER

For organisations looking to improve operational and economic efficiency.

Incorporating sophisticated data encryption, Airsys.Cloud’s Task Manager keeps your sensitive task information secure.



- ✓ Keep secure information
- ✓ Improve efficiency
- ✓ Do more with what you have

PUSH-TO-VIDEO

In day to day operations, a video capability can save valuable time and provide access to specialists who are able to see what you're seeing and advise how to proceed, potentially saving expensive specialist call outs.

In emergency situations, full-duplex video with audio can help prevent a potentially dangerous situation from escalating, minimising danger to those involved.

- ✓ Save time
- ✓ Emergency video
- ✓ Minimise danger

SIM CONNECTIVITY

Sim cards at Airsys.Cloud.

Our sim cards give you the data to do what you need to do when you need to do it.

- Choose an amount of data to suit your company requirements aggregated across the fleet.
- Data only, white-listed to URLs required for Airsys.Cloud services and device updates to ensure security and avoid device misuse.
- Acceptable Use Policy applies
- Non steered EU data roaming
- Our SIM fleet is managed by Airsys and our SIM provider via a portal
- Wi-Fi connectivity is supported

Non steered EU data roaming
Seamlessly roam across Europe
